## What's New In Windows 7 Tweaks - Favsofts?

- Fix some bugs - Optimize a bit the interface1. Field of the Invention This invention relates to locking devices and more particularly to a locking device for use in securing an electrical conduit that is formed of electrical conductor which is accommodated in a conduit. 2. Description of the Prior Art Locking devices which are used to secure an electrical conduit that is formed of electrical conductor, such as a length of a large number of serially connected electrical conductors, to an electrical junction box have been known in the prior art. In one known form, the locking device is provided with a body that defines a portion of a conduit and has a cylindrical portion with an inner diameter which is adapted to be inserted within the body of a conduit. A plurality of locking members are disposed within the cylindrical portion and are disposed in spaced relationship along the length of the cylindrical portion. Each of the locking members has a hook-like portion and a locking tab portion. The locking tab portion is disposed on the outside of the cylindrical portion, and the hook-like portion is disposed on the inside of the cylindrical portion. The locking tab portion is adapted to engage the body of the conduit, and each of the hook-like portions is adapted to be engaged with the body of the conduit. Thus, the locking tab portions are positioned in end-to-end relationship with the cylindrical portion. Each of the hook-like portions has a chamfered portion disposed at the inside end thereof. The locking tab portions and the cylindrical portions have radial slots formed therein and a flexible lock wire is disposed in each slot. The lock wire is adapted to permit longitudinal displacement thereof in one direction while resisting longitudinal displacement thereof in the opposite direction. Each of the locking tab portions is disposed at a location such that the chamfered portion thereof engages the outside of the cylindrical portion, and the cylindrical portion is disposed at a location such that the hook-like portion thereof engages the inside of the body of the conduit. When assembling this prior art locking device, the lock wires are longitudinally displaced in the one direction to permit insertion of the cylindrical portion within the body of the conduit. The lock wires are then longitudinally displaced in the opposite direction to retain the cylindrical portion within the body of the conduit. In addition, the body of the conduit is longitudinally shifted to lock the hook-like portions of the locking members in the body of the
